Ideas are seeds.

Let us grow them into the garden of your dreams.

LET'S GET STARTED.

DESIGN. The key to a beautiful, healthy, low maintenance garden is to create a design and action plan. Whether for a new or an existing garden, this will save money and time and ensure your plants stay happy and healthy!

PLAN. Part of the design process is to set you up with an ongoing plan for how to implement and maintain your garden based on your budget, time and interest.

BUILD AND MAINTAIN.
We can fully implement and maintain your gardens, *or* consult with you about how you can fully implement and maintain them — or anywhere in between!

Living Landscapes

We offer a wide range of **ecological landscaping** and **gardening services** in Peterborough, Southern Ontario, and beyond!

Our services include:

- Permaculture / Ecological Design
- Orchards & Food Forests
- Edible & Decorative Gardens
- Wildlife Gardens
- Interiorscaping / Indoor Plants
- Consulting and Education
- General Maintenance
- Edible & Medicinal Plant Sales
- Pruning and Trimming
- Plant & Tree Care
- Soil Building

It all sprouts from a really good plan.

DESIGN. PLAN.
BUILD & MAINTAIN.

Living Landscapes

Envision your eden.

Living Landscapes

We can help. We joyfully assist you turn parts of, or your entire property into a low maintenance, productive, and beautiful, wildlife attracting oasis. We use an array of plants, from berries and nut shrubs, to perennial greens, flowers and herbs, to fruit and nut trees. The most exciting part is having edible plants blend beautifully into the existing landscape, which, humbly, we think we're pretty good at.

What makes us ecological? Using a variety of innovative **ecological principles** in the design and maintenance of gardens ensures **healthy,** productive plants and soil. This allows for **minimal maintenance** and inputs.

We also use exclusively organic, heritage variety seeds for our annuals, and wild harvested seeds for our perennials.

Gardens

Wildlife Gardens

We can create the ideal habitat and food sources for all your favorites birds, animals, and insects. We can sit down and figure out what sort of creatures you want living in your yard, and design and implement low maintenance, self sustaining habitats that blend beautifully into the landscape.

Decorative Gardens

Whether you're looking for a modest garden bed, or a magnificent pallet of colours and texture sweeping across your property, we can help you draw out your vision, or turn an existing vision into reality. Using 3D design software, we can show you what your garden will look like before we even break ground, and work with you to refine the

Food Gardens

There's nothing quite like a beautiful and bountiful vegetable garden right outside your door. Being able to harvest dinner without putting on your shoes is, in our opinion, one of the most delightful parts of summer.

Trees

Orchards & Food Forests

Self sustaining, low maintenance, diverse, resilient, and abundant. Food forests are our passion. When we say food forests, we mean literally creating a fully functioning forest ecosystem, on large or small scales, filled with edible food. And a lot of it!

We integrate traditional orchard trees (fruit and nut) into multi-story systems, with shrubs, small plants, and groundcovers seamlessly mixed into the system. By utilizing all levels of space, and harmonizing root and microbial systems, we can create an extremely efficient, high yielding system. Every plant serves multiple functions, such as insect attraction, weed suppression, fertilization, windbreaks, and mulch creation, all while being edible or medicinal.

The beauty of these systems is that, once established, they are remarkably little work. Just as you can walk into a forest

Indoors

Interiorscaping

The art of bringing plants indoors and arranging them in a way that creates a healthy, peaceful, relaxing and inviting environment.

- A necessary part of the modern home or work environment
- A variety of plants indoors:
  - reduces levels of stress
  - contributes to air quality
  - increases productivity

Trent has been working with planter designs for the past 10 years, and has studied indoor plants for all types of environments. Knowing which plants absorb which chemicals, he can tailor the design to fit your home depending on your flooring, type of carpets, and paint, among numerous other factors.
